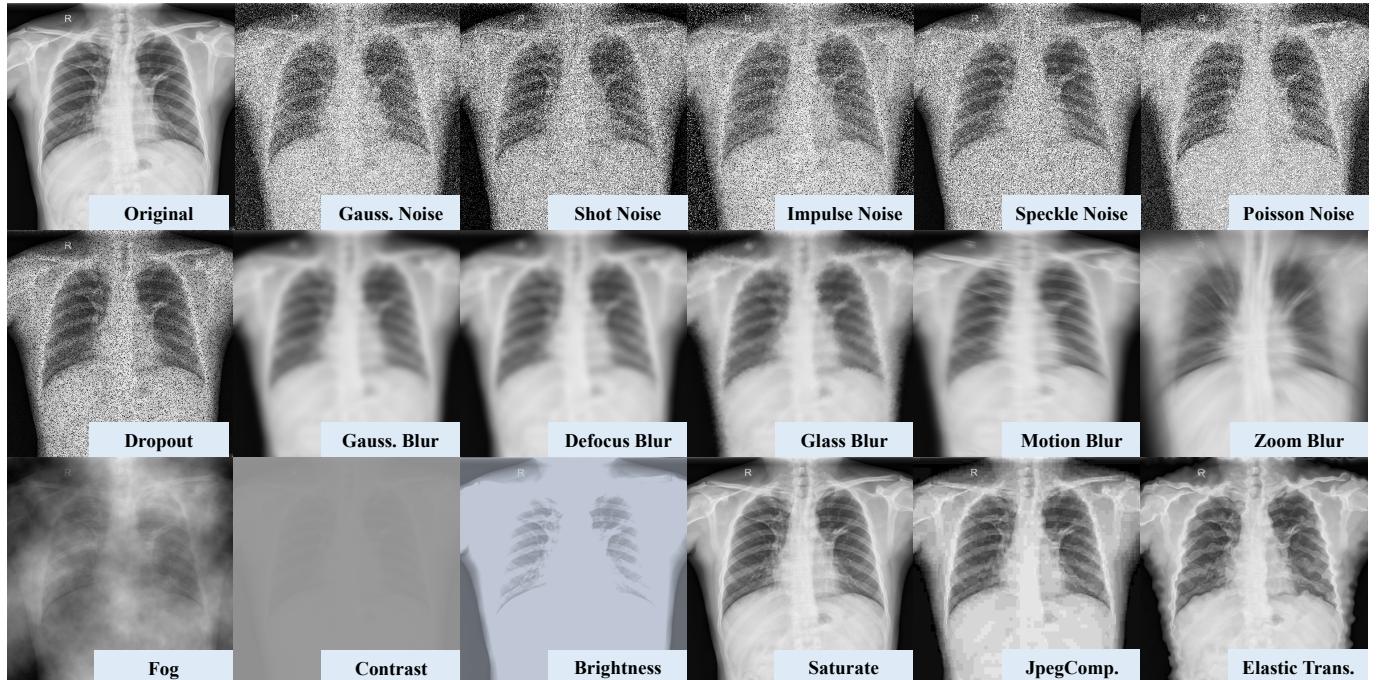

Fig. 1: The visualization of different data corruptions and perturbations. We choose these noises, blur, and digital transformations that are common in real-world applications for verification of the robustness of our model.

Fig. 2: The robustness performance comparison between our proposed method and baselines on different data corruption. The experiments conducted on the MC dataset are reported in the first row; on the JSRT dataset are reported in the second row; the results on the SH dataset are shown in the third row.

Fig. 3: The visualization of segmentation results. The blue region denotes the mask, and the red area is the predicted result. The model is trained on M dataset, then tests on (a) MC validation dataset; (b) JSRT dataset; (c) SH dataset; (d) Poisson noised MC dataset; (e) zoom blurred MC dataset; (f) contrast transformed MC dataset.
